OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT, P.C. 1940 DUKE STREET ALEXANDRIA, VA 22314			EXAMINER MACARTHUR, SYLVIA	
			ART UNIT 1763	PAPER NUMBER
			NOTIFICATION DATE 06/18/2007	DELIVERY MODE ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com
oblonpat@oblon.com
jgardner@oblon.com

Office Action Summary	Application No. 10/721,500	Applicant(s) FINK ET AL.	
	Examiner Sylvia R. MacArthur	Art Unit 1763	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 February 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 and 16-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13, 16, 17 and 21-23 is/are rejected.
- 7) ☒ Claim(s) 14 and 18-20 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 26 November 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see page paragraph, filed 2/21/2007, with respect to the prior art of Strang et al have been fully considered and are persuasive. The rejections of Strang et al has been withdrawn. The anticipation rejections to Lee et al were withdrawn as Lee fails to teach the based upper portion with a bottom surface having a recessed formed therein as applicant argues on page 5 first full paragraph.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-8, 11, 12, and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Benjamin et al (US 6,847,014).

Claim 1: Benjamin et al teaches an apparatus for controlling the temperature of a workpiece using a lateral thermal break, see Fig. 5. The thermally zones substrate holder/base 502 comprises an upper portion with a top surface (flat support 506) and a lower portion positioned within the recess and seated to the floor of the recess to fill the recess.. The bottom surface of the holder has a recess formed therein wherein a plurality of temperature control elements are present see T1 and T2. Thermal insulators 510 are provided with the recess and disposed

Art Unit: 1763

between temperature control elements T1 and T2. See also Figs. 3A and 4A wherein the base is 306 with recesses 308,309 and Fig.4A with recesses illustrated on the upper surface of 410.

Claim 2: Col. 6 lines 46-55 teaches that a dual or multiple manifold heat sink is used to circulate a temperature controlled fluid. Thermal insulators 510 separate the heat sink into a plurality of zones, see col. 6 lines 55-64. The insulator (empty space is within the recess)

Claim 3: Fig.4B of Benjamin et al illustrates the flow of heater power is circular in the plane of the top surface of the substrate holder. The difference between this illustrated embodiment and that of Fig.5, the temperature control elements are based upon fluid flow instead of heater coils, see col. 6 lines 12-63.

Claim 4: See Figs. 4B and 5. The fluid flow is concentric about a central axis of the substrate holder.

Claim 5: At least one insulator 510 is concentric with the fluid flows see Fig. 5.

Claims 6 and 7:

Col. 6 lines 46-63 teaches the temperature zones comprise heating elements or heat sinks with fluid flow.

Claim 8: Fig. 4B illustrates an insulator 404 is concentric with each heating element.

Claim 11: The temperature control elements are radially extending according to Fig.5..

Claim 12:Col. 6 lines 46-64 teach that the thermal insulators 510 azimuthally separate the base 502 into multiple zones.

Claim 23: The thermal insulation 510 is described in col. 6 lines 46-65 as a ceramic material.

4. Claims 1-8, 11, and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Arai

Art Unit: 1763

et al (US 6,664,738).

Regarding 1: Arai et al teaches a thermally zoned substrate holder S, comprising:

a base having top and bottom surfaces, the top surface configured to support a substrate, see Fig.2. a plurality of temperature control elements 11 and 12 inside the base, each element having a top surface and a bottom surface; at least one insulator 13, having a lower coefficient of thermal conductivity than a material of the base, the at least one insulator being disposed between the plurality of temperature control elements and substantially thermally separating the plurality of temperature control elements, see Fig. 2.

Regarding claim 2: The apparatus according to claim 1, wherein first and second of the plurality of temperature control elements receive separate fluid flows, col. 2 lines 57-67. Regarding claim

3: The apparatus according to claim 2, wherein at least one of the fluid flows is substantially circular in the plane Of the top surface of the substrate holder, see Figs. 2-4. Regarding 4: The apparatus according to claim 2, wherein the fluid flows are concentric about a central axis of the substrate holder, see Figs. 3 and 4.

Regarding claim 5: The apparatus according to claim 2, wherein the at least one insulator 13 is concentric with the fluid flows.

Regarding claim 6: The apparatus according to claim 1, wherein the plurality of temperature control elements each include at least one heating element, see col.4 line 50.

Regarding claim 7: The apparatus according to Claim 6, wherein each heating element is concentric about a central axis of the substrate holder, see Figs. 3 and 4

Regarding claim 8: The apparatus according to Claim 7, wherein the at least one insulator is concentric with each heating element 11/12, see Fig. 4

Art Unit: 1763

Regarding claim 11: The apparatus according to claim 1, wherein the temperature control elements are radially extending, see Figs.3 and 4.

Regarding claim 12: The apparatus according to claim 1, wherein the temperature control elements comprise radially extending elements and azimuthally extending elements, see Figs. 1 and 2.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made:

6. Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Benjamin et al or Arai et al in view of Lee et al.

Benjamin et al teaches temperature sensor 309 as recited in col. 5 lines 22-40 wherein sensors are associated with each heating zone. Benjamin et al further suggests that the temperature sensors can be mounted through ports to read from the workpiece or mounted within or to the back of the support.

Benjamin et al fails to teach temperature detectors at positions in the temperature control elements.

The teachings of Arai et al were discussed above. Arai et al fails to teach temperature detectors.

Recall Lee teaches temperature detectors 60 disposed at predetermined positions in the

Art Unit: 1763

temperature control elements as illustrated in Fig. 3. 5.

The motivation to modify the apparatus of Benjamin et al or Arai to position the temperature sensors (detectors) in the temperature control elements is to have a more accurate reading of the temperature according to Lee et al col. 10 lines 25-33. Thus, it would have been obvious for one of ordinary skill in the art at the time of the claimed invention to provide temperature detectors in direct physical contact with each temperature control element (zone) to allow precise temperature measurements of each region.

7. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art of Benjamin et al or Arai et al, henceforth referred to as the primary prior art.

The teachings of the primary prior art were discussed above.

All fail to teach the temperature control elements include a plurality of fins (this claim is interpreted as a reference of shape).

The shape of the temperature control elements being fins is a matter of optimization. The shape of the temperature control elements will affect its thermodynamics or surface area available for thermal flux. It is the examiner's position that the shape would be optimized to ensure that the optimal thermal flux results. Furthermore, it was held in *In re Dailey*, 357 F. 2d 669, 149 USPQ 47 (CCPA 1966) that the shape was a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular shape was significant. Thus, it would have been obvious for one of ordinary skill in the art at time of the claimed invention to design the temperature control elements to include fins, that is to have a fin-shape.

8. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Arai et al (US

Art Unit: 1763

6,664;738) alone as evidenced by the denotation of "rib" according to Answers.com. The teachings of Arai et al were discussed above.

Arai et al fails to specifically teach that the insulator is solid.

Arai does teach that the slit whose function to suppress heat transfer can be reinforced by a rib. According to Answers.com a rib a piece of material used to reinforce or support its point of use. In this case, as Arai et al teaches in col. 8 lines 35-40 that the use of rib would be motivated by a need to prevent the rigidity of the support being sacrificed. Thus, it would have been obvious for one of ordinary skill in the art at the time of the claimed invention to utilize a rib in the slit of Arai in order to increase the rigidity of the support while providing the thermal insulation between the thermal control elements.

9. Claims 16, 17, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Benjamin et al.

Benjamin et al teaches thermal breaks 510(gas filled chambers) to separate and thermally insulate thermal control elements (denoted by T1 and T2), see also col. 6 lines 46-63. Benjamin et al fails to teach the dimensions of the chambers.

The motivation to modify the chamber of Benjamin et al to design the chamber with a height that will provide optimal thermal insulation between the thermal control elements of their respective substrate holders. According to In re Woodruff, 16 USPQ2d 1934, it is obvious to one of ordinary skill in the art to determine the optimum value of a cause effective variable such as the dimensions of the gas filled insulation chamber through routine experimentation. Thus, it would have been obvious for one of ordinary skill in the art at the time of the claimed invention

Art Unit: 1763

to construct the gas filled chamber of Benjamin et al to the optimal height to provide optimal thermal insulation between the thermal control elements, thus enhancing temperature control of the wafer.

Allowable Subject Matter

10. Claims 14 and 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record fails to teach or fairly suggest an insulator comprising a gas-filled chamber as recited in claim 14. Furthermore, the prior art fails to teach or fairly suggest at least one insulator comprising a reflective surface.

Conclusion

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
